

Introducing the Black Robin Designs Bamboo Socks

For maximum comfort and protection of sensitive skin, the sandals should be worn with smooth, soft, close fitting socks. Our Black Robin Designs socks have been designed specifically for use with sandals.

Inappropriate socks, especially for very young babies with sensitive skin, is a common cause of problems for children wearing foot braces for prolonged periods of time.

Black Robin Designs

Why Bamboo?

- Super soft stretchy fabric fitting close to the skin
- Anti-static and kind to allergy prone skin
- Antibacterial properties of bamboo reduce foot smells
- UV protection of bamboo fabric blocks out most UV rays, perfect for children's sensitive skin
- Moisture wicking bamboo rich material keeps feet dry and cool
- Bamboo is warm yet breathable, making it ideal in all temperatures

Environmental benefits of Bamboo socks

Fully biodegradable

Less water needed for Bamboo than other crops

Fast growing and naturally occurring

Yields same as cotton using 10% of the land area

The Black Robin Designs Bamboo socks now come in two styles:

- Double Layered
- Single Layered

Double Layer

The Double Layered bamboo sock is inspired by the type of socks used by long distance runners. The outer and inner sock layers move freely over one another, minimising rubbing forces between the skin and soft tissues. A well made double layered sock massively reduces skin friction, which is the major cause of blisters and sores.

As sores can be common with children in foot braces, wearing socks is vital for continuing their treatment.

Single Layer

After many requests, we are now pleased to offer a single layered sock. The single layer comes with all the benefits of bamboo in a thinner sock style.

Children who have less sensitivity and do not suffer from blisters and sores may benefit from using the light single layer sock. In warmer climates, children may find a thinner sock easier to tolerate.

Black Robin Designs

Other features of the Black Robin Designs Bamboo Socks:

- Extra height, so ideal for wearing with various types of AFO
- Silicon dots on sole to hold sock in position
- Minimal internal seam
